

How Governments, Telecom, and Electric Power Utilities Suppress the Truth About Non-ionizing Radiation

Non-ionizing radiation (NIR) is a type of electromagnetic radiation that does not have enough energy to remove electrons from atoms or molecules. It is emitted by a variety of sources, including cell phones, Wi-Fi routers, computers, and power lines.

There is a growing body of evidence that NIR can have harmful effects on human health. These effects include:

- Cancer
- Neurological disorders
- Reproductive problems
- Cardiovascular disease
- Electromagnetic hypersensitivity (EHS)

Despite the growing evidence of harm, governments, telecom companies, and electric power utilities have a vested interest in suppressing the truth about NIR. This is because they profit from the sale of NIR-emitting devices and services.

How Governments Suppress the Truth About NIR

Governments have a number of ways to suppress the truth about NIR. These include:

- Funding research that downplays or dismisses the health risks of NIR

- Suppressing or discrediting research that shows the harmful effects of NIR
- Setting safety standards that are too weak to protect public health
- Censoring information about NIR in the media
- Intimidating scientists and researchers who speak out about the dangers of NIR

How Telecom Companies Suppress the Truth About NIR

Telecom companies have a vested interest in suppressing the truth about NIR because they profit from the sale of cell phones and other NIR-emitting devices. They use a number of tactics to suppress the truth, including:

- Funding research that downplays or dismisses the health risks of NIR
- Lobbying governments to set weak safety standards
- Censoring information about NIR in the media
- Intimidating scientists and researchers who speak out about the dangers of NIR
- Marketing NIR-emitting devices as safe and harmless

How Electric Power Utilities Suppress the Truth About NIR

Electric power utilities have a vested interest in suppressing the truth about NIR because they profit from the sale of electricity. They use a number of tactics to suppress the truth, including:

- Lobbying governments to set weak safety standards
- Censoring information about NIR in the media
- Intimidating scientists and researchers who speak out about the dangers of NIR
- Marketing electric power as safe and harmless

What You Can Do to Protect Yourself from NIR

There are a number of things you can do to protect yourself from NIR exposure. These include:

- Limit your use of cell phones and other NIR-emitting devices
- Use speakerphone or headphones when talking on your cell phone
- Keep your cell phone away from your body when not in use
- Turn off Wi-Fi and Bluetooth when not in use

- Avoid living near power lines
- Use EMF-shielding materials in your home and office

Governments, telecom companies, and electric power utilities have a vested interest in suppressing the truth about NIR. This is because they profit from the sale of NIR-emitting devices and services. As a result, it is important to be aware of the health risks of NIR and to take steps to protect yourself from exposure.
