- **Drums:** Drums come in all shapes and sizes, but the most common ones for kids are the snare drum, bass drum, and tom-toms.
- **Cymbals:** Cymbals are metal discs that are hit together to create a bright, shimmering sound.
- **Shakers:** Shakers are filled with small beads or seeds that make a shaking sound when they are shaken.
- **Tambourines:** Tambourines are circular frames with small jingles attached to them.

The way you hold a percussion instrument will depend on the type of instrument it is. Here are some general guidelines:

- **Drums:** Drums are typically held with the sticks in one hand and the other hand on the rim of the drum.
- **Cymbals:** Cymbals are held in one hand and struck with the other hand.
- **Shakers:** Shakers are held in one hand and shaken back and forth.
- **Tambourines:** Tambourines are held in one hand and shaken or struck with the other hand.

Once you know how to hold a percussion instrument, you can start learning how to play basic rhythms. Here are a few simple rhythms to get you started:

- **Quarter notes:** Quarter notes are the most basic type of rhythm. They are played by striking the instrument once on each beat.

- **Half notes:** Half notes are twice as long as quarter notes. They are played by striking the instrument twice on each beat.
- **Whole notes:** Whole notes are four times as long as quarter notes. They are played by striking the instrument once on four beats.

You can combine these basic rhythms to create more complex rhythms. For example, you could play a quarter note followed by a half note followed by a whole note.

To help you practice your percussion skills, we've created a free audio track that you can download here. The track includes a variety of basic rhythms, played at different tempos. You can use the track to practice playing along with other instruments, or you can simply listen to it to get a feel for different rhythms.
