

# The Almanac for Kids: Children's Edition on Seasons: An In-Depth Look into the Changing Year

## The Science of the Seasons

The Earth's seasons are caused by the tilt of its axis. As the Earth orbits the Sun, different parts of the planet are tilted towards or away from the Sun. This causes the amount of sunlight that reaches different parts of the Earth to vary, which in turn causes the seasons.

In the Northern Hemisphere, summer occurs from June to August, when the Earth's Northern Hemisphere is tilted towards the Sun. This means that the days are longer and the nights are shorter. The Sun's rays are also more direct, which means that the temperatures are warmer.

In the winter, which occurs from December to February, the Earth's Northern Hemisphere is tilted away from the Sun. This means that the days are shorter and the nights are longer. The Sun's rays are also less direct, which means that the temperatures are colder.

## **The Plants and Animals of the Seasons**

The changing seasons have a significant impact on the plants and animals that live on Earth. In the spring, as the days get longer and the temperatures warm, plants begin to grow and bloom. Animals start to come out of hibernation and raise their young.

In the summer, the days are longest and the temperatures are warmest. This is the time of year when plants grow the most and animals are most active. Many animals give birth to their young in the summer.

In the fall, the days get shorter and the temperatures cool. Plants begin to lose their leaves and animals start to prepare for winter. Some animals migrate to warmer climates, while others hibernate.

In the winter, the days are shortest and the temperatures are coldest. Plants are dormant and animals are less active. Some animals, such as bears and squirrels, hibernate during the winter.

## **The Cultural Traditions of the Seasons**

The changing seasons have also had a significant impact on human culture. Many cultures have developed traditions and festivals that are associated with each season.

In the spring, many cultures celebrate the new life that is brought by the season. This is the time of year when many religious holidays are celebrated, such as Easter and Passover.

In the summer, many cultures celebrate the abundance of food and sunshine. This is the time of year when many festivals are held, such as the Fourth of July and Bastille Day.

In the fall, many cultures celebrate the harvest. This is the time of year when many cultural holidays are held, such as Thanksgiving and Halloween.

In the winter, many cultures celebrate the return of light and hope. This is the time of year when many religious holidays are celebrated, such as Christmas and Hanukkah.
